“Runs 8 frequencies at once. That’s just one of the “GB-4000” differences!”

The “GB-4000” is one of the most versatile 20 Megahertz sweep function generators ever built.

It incorporates the very best of function generator technology with the most advanced electronics for a truly superior design, yet it is so easy to use that anyone can operate it with its multi-function keypad.

The “GB-4000’s” frequencies are crystal controlled, and guaranteed not to drift. Just enter a frequency and that is the exact frequency you will get.

The “GB-4000” has 2,000 programmable channels which can hold up to 48 frequencies each. These channels can be programmed in single mode or multiple mode. When programmed it only takes three easy steps to run any of the 2,000 channels.

Step 1: Press the auto channel button using the keypad.

Step 2: Using the key pad enter the auto channel number you want to use.

Step 3: Using the keypad press the run button. Then sit back and let the “GB-4000” automatically run all the frequencies which have been programmed into the auto channel you want to use.

The “GB-4000” can easily be custom programmed using the key pad. For those who like computers it comes with software that allows you to custom program it from your computer also.

The “GB-4000” also has an optional channel sweep feature with a 2 to 20,000 Hertz sweep capability for any channel or frequency that may be run.

The “GB-4000” also has the ability to sweep up or down through hundreds or even millions of frequencies over a pre-selected period of time. The advantage to this is you can run through many frequencies one right after another.

Most generators only have one output circuit. But the GB-4000 has two. One circuit has a 0.75 watt power output for audio frequencies used without an RF carrier frequency. The other circuit is for audio frequencies used with an RF carrier frequency including higher RF frequencies up to 20 million Hertz. It has a 3.7 watts power output.

This means it not only has the power to run one frequency at a time but the “GB-4000” is the only frequency generator that can run up to 8 frequencies simultaneously to 40,000 Hertz with sufficient power. This means it is up to 8 time faster to use than any other generator.

Nobody wants to spend 40 minutes running 8 frequencies when you can spend only 5 minutes running 8 frequencies using the GB-4000. Your time is important to you.

The “GB-4000” can also run 2 frequencies simultaneously to 20MHz or 20 million Hertz.

The “GB-4000” has both sine and square wave capabilities. Square wave has a 10 to 100% duty cycle capability.

The “GB-4000” has a 1 to 5000 Hertz gating or pulsing feature with a 10 to 90% duty cycle capability.

The GB-4000 also has both an Audio mode and an RF mode for greater flexibility in running frequencies.

Many other frequency generators only have two connectors but the “GB-4000” has four, doubling its capability.

Each generator is a small unit weighing only two pounds and can be held in your hand.

If you’re one of the many people wanting to own a function generator with the capabilities of the “GB-4000” then this is the frequency generator you should choose.
“GB-4000” FEATURES

- 20,000,000 Crystal Controlled Frequencies for Perfect Accuracy
- Has Four Connections Doubling Its Capability
- Small Lightweight Design Only 2 Pounds
- LCD Displays Frequency You Are Using
- LCD Displays the Auto Channel You Are Using
- LCD Displays Amount of Time Selected When Channel Is Running
- “RF Indicator Light” Lights When Running in RF Mode
- Runs Up to 8 Frequencies Simultaneously
- Has a 3.1 MHz RF Carrier Frequency Which Creates Many Sideband Frequencies
- “Square/Sine Button” Allows You to Change from Square to Sine Wave Mode
- 20 Million Frequencies
- “Auto Channel Button” Allows You to Run Any of the 2000 Custom Programmed Auto Channels
- “RF/Audio Button” Allows You to Change from RF to Audio Mode
- “Sweep Button” Allows You to Sweep Through 1 to 20,000,000 Frequencies
- “Output Knob” Makes it Easy to Control the Power Level
- “Channel Sweep” Allows Up to a 20,000 Hertz Frequency Sweep in Auto Channels
- “Custom Button” Allows You to Create Up to 2000 Custom Programmable Channels
- “#5 Button” Allows You to Pause a Program
- “#4 Button” Mutes the Beeper
- “Square/Sine Button” Allows You to Change from Square to Sine Wave Mode
- “RF Indicator Light” Lights When Running in RF Mode
- “Output Knob” Makes it Easy to Control the Power Level
- “Channel Sweep” Allows Up to a 20,000 Hertz Frequency Sweep in Auto Channels
- “Custom Button” Allows You to Create Up to 2000 Custom Programmable Channels
- “#6 Button” Allows You to Skip a Frequency or Group of Frequencies
- 30-Day No Risk Money-Back Guarantee
- One-Year Warranty on Parts and Labor
All though the “GB-4000” works great alone, many people have asked if it was possible to increase the 3.7 watts power output of the “GB-4000.”

With this in mind we developed the “SR-4” amplifier with a 1 to 15 watts variable power output capability controlled by the “GB-4000.”

Function generators cannot put out 15 watts but a separate connectable amplifier can.

To get the power output of the “SR-4” amplifier all you have to do is plug the “GB-4000” into it. The amplifier then amplifies the “GB-4000’s” frequencies from 1 to 15 watts power output.

One of the great features of the “SR-4” is more hookups. The “SR-4” now has four sets of hookups for multiple use. All of the positive out hookups are connected together and all of the negative out hookups are connect together so it does not matter which one you use.

If you are considering purchasing the “GB-4000” and want to have the advantages of the “SR-4” 1 to 15 watts power output amplifier then all you have to do is order it when you purchase the “GB-4000.”
The “M.O.P.A.” (Master oscillator power amplifier) 20 to 190 watts power RF amplifier is the newest frequency generator/amplifier we produce. It is an updated replica of the original old vacuum tube equipment that was built during the 1930’s/1950’s era.

Though it has been updated with modern electronics it still uses the RF tank coil and 812a vacuum tube needed to produce the original analog sine wave and square wave waveform output from that old 1930’s/1950’s style equipment.

It has two variable frequency ranges. One is from about 2.2 to about 3.8MHz and when producing harmonic sidebands its frequency range goes from about 1.7 to 4.3MHz.

The second frequency range covers the GB-4000’s complete frequency range from 1 Hertz to 20MHz or 20 million Hertz. The “M.O.P.A.” is connected to the “GB-4000” through a BNC connector.

When connected to the “GB-4000” the audio frequencies can be amplified by the “M.O.P.A.” amplifier and output through the noble gas filled plasma tube.

The “M.O.P.A.s” RF output frequency then becomes the carrier frequency for all audio or RF frequencies output from the “GB-4000”.

The “M.O.P.A.s” RF output frequency can also be set to a specific frequency within its frequency range. That frequency can then be gated or pulsed with a duty cycle from a 10% to a 90% output from the “GB-4000.”

To see the “M.O.P.A.s” specifications please read the next page.

Please note: This plasma tube is sold by a separate company. It has been fully tested by us and is guaranteed to work with the “M.O.P.A.”. A smaller plasma tube will not be able to handle the power output of the “M.O.P.A.” and may void the warranty. We can help make sure you get the correct plasma tube when you purchase the “M.O.P.A.”.
**M.O.P.A. Specifications**

1. **Fabrication:** Built by hand and tested for quality assurance with one year *limited warranty.*
2. **Proven design:** Solid state combined with vacuum tube technology used for over 80 years.
3. **Amplification method:** Original vacuum tube amplification.
4. **Amplification voltage:** High voltage (1350 volts).
5. **Amplification current:** Low current (20 to 240 milliamps).
6. **Vacuum tube vs. Solid state amplification:** Modern solid state uses low voltage and high current designs. The M.O.P.A. uses the high voltage low current design.
7. **Milliamp meter:** Built in.
8. **RF carrier waveform:** Sine wave.
9. **Sine wave digital or analog:** Analog.
10. **Frequency Counter:** Built in for accurate reading of the carrier frequency.
11. **Carrier frequency tuning:** Variable tuning capacitor.
12. **First frequency range:** Variable RF carrier approximately 2.2 MHz to about 3.8 MHz.
13. **Second frequency range:** Input from the GB-4000 variable from 1 to 20MHz (20 million Hertz).
14. **Power output:** Variable modulated power of 20 to 190 watts.
15. **Maximum output:** When gated or modulated 190 watts at 240 milliamps.
16. **Frequency input method:** Designed to work exclusively with the GB-4000 frequency generator through a BNC cable connection.
17. **Frequency output modulation:** GB-4000 audio frequencies up to 40,000 Hertz square wave @ 100% AM modulation.
18. **Maximum frequencies output:** When connected to the GB4000 it can transmit up to 8 frequencies simultaneously.
19. **Gating or pulsing:** 1 to 5000 Hertz using the GB-4000.
20. **Frequency delivery:** Gas filled tube (Sold by approved separate company. *Limited warranty applies only if another type of plasma tube is used, then there is no warranty*).
21. **Tube ignition:** Instantaneous.
22. **SWR meter:** None. Gas filled tube is connected directly to the RF tank coil requiring no SWR (Standing Wave Ratio) meter. This method, unlike the SWR meter systems, delivers almost 100% power output to and through the gas tube.
23. **Useful range:** 30 feet when using gas tube.
24. **Suggested range:** 1 inch to 2 feet when using gas tube. With no 1 to 3 feet null zone (non-effective range) it is not necessary to stay 3 to 6 feet away from the gas tube.
25. **Size:** Compact design - 10.5" Wide X 17" Long X 10" High.
26. **Power used:** Can be built for use with 110/120 volts AC or 220/240 volts AC.
27. **Power usage:** Approximately 350 watts. When connected to the GB-4000 approximately 375 watts.
28. **Weight:** 19 pounds.
GB-4000 generator list price is $1725.00. The SR-4 linear amplifier list price is $595.00 if purchased together. The M.O.P.A. oscillator/amplifier is $2495.00. The M.O.P.A. requires a signed purchase agreement and comes with a two-year limited warranty. To purchase the GB-4000, SR-4 amplifier or M.O.P.A. generator/amplifier please call your distributor. Most of our distributors accept all major credit cards, money orders or cashier checks. For personal checks allow up to two weeks to clear. Please add sales tax where applicable. Your ordered GB-4000 and SR-4 amplifier will be shipped in 1 to 2 days after the order is received at our office. The M.O.P.A. generator/amplifier can be shipped within 1 to 3 days after receiving the purchase agreement. Allow up to 3 days for delivery. Shipping is FREE within the 50 states. We ship priority mail or FedEx.

Try the “GB-4000”, “SR-4” amplifier, or M.O.P.A. amplifier for 60-days. You have 60 days to decide to keep them or return them for a full refund, less shipping and repackaging fee. Returned generator must be in original condition. The “GB-4000”, “SR-4” and “M.O.P.A.” amplifiers also include a full two-year limited warranty on parts and labor. (Exception: 90 days on 812a vacuum tube.)
